

21st Century Consulting Services

Custom Educational Technology Solutions for Teachers and Schools

Where do you stand in relation to your state's educational technology plan?

Are you empowered to infuse 21st Century Skills into the classroom everyday?

The NETS for Teachers (NETS•T) provide teachers with the tools to engage their students, improve learning environments and provide a positive model for their school community.

What prevents you from adopting 21st Century educational technology standards?

■ Professional Development

- No comprehensive training program to address school or division goals
- No in-house training, must rely on outside vendors
- No communities of learning within my school division

■ Hardware/Infrastructure

- Cost prohibitive, funding does not cover replacement cycle
- Incompatible hardware, no standards
- Lack of bandwidth and technical personnel

■ Technical Support

- Stretched too thin
- Not managed efficiently
- Either no administrative or instructional support for EdTech

■ Software/Applications

- Too many unrelated applications, not integrated with other systems
- Not supported by school network or hardware
- Sporadic licensing and training
